

# Need Commercial **Satellite** Services?

## DISA's DSTS-G contract helps you get the most bytes for your buck

DISA's Defense Information Systems Network (DISN) Satellite Transmission Services–Global (DSTS-G) contract is your most cost-effective and flexible solution for C-, Ku-, or Ka-band fixed satellite services providing net-centric applications to the warfighter.

- ▶ Full or partial transponder leases, globally, in any increment of time, including multiyear arrangements
- ▶ Lease/purchase of terminals and teleport services
- ▶ Managed services such as bandwidth on demand or IP over SATCOM
- ▶ Operations and maintenance (O&M) services for earth terminals
- ▶ Host nation approval (HNA) assistance
- ▶ End-to-end turnkey services
- ▶ Specialty items including portability and bandwidth management
- ▶ Expedited services for same day critical circumstances

As reported to Congress in June 2006, DSTS-G serves the majority of DoD's commercial satellite services needs in a highly competitive framework, and as a result DSTS-G has continued to provide prices below both industry averages and competing contracts. Also, as a result of recently streamlined business processes, DSTS-G now offers faster order turn around with reduced fees.

DISA continues to work with satellite operators, vendors, and DoD stakeholders to ensure that DSTS-G continues to improve and offers the warfighter the best option for commercial satellite services. Let DoD's commercial satellite systems experts help with your next satellite service solution by using the contact information provided on this sheet.
